(a) energy spread 5%, seed 100
adaptive edges, $B = 16$
mean $\gamma$
$\gamma = 9.982 \pm 0.541$
$N = 512$
counts per bin
$\gamma$ (dimensionless)
(b) angular spread 5°, seed 103
$\sigma_\theta = 5°$ (dashed)
median $|\theta| = 101.8$ mrad (dotted)
$u_\perp$ $(m_e c)$
$u_\parallel$ $(m_e c)$
(c) post-fix bin independence; $B = 64$ is the reference
ergy $B_z$
gular $B_z$
gular $B_y$
$4.3 \times 10^{-6}$
$4.4 \times 10^{-5}$
$5.6 \times 10^{-4}$
1%
energy $B_y \equiv 0$ at both bin counts (no transverse current)
relative deviation of $B = 16$ from $B = 64$ (dimensionless, log)
