(a) energy spread 5%, seed 100
mean γ
adaptive edges, B = 16
γ = 9.982 ± 0.541
N = 512
counts per bin
γ (dimensionless)
(b) angular spread 5 °, seed 103
σθ = 5 ° (dashed)
median |θ| = 101.8 mrad (dotted)
u⊥ (mec)
u∥ (mec)
(c) measured binning error and model, both cases
energy 5%: measured Tb − T
energy 5%: model ×0.023
angular 5 °: measured Tb − T
angular 5 °: model ×0.331
10−3
bin count B (log)
Tb − T, peak-normalised, 8 ≤ d ≤ 16 cells (log)
