(a) energy spread 5%, seed 100
adaptive edges, $B = 16$
mean γ
counts per bin
γ
(b) angular spread 5°, seed 103
$u_\perp$ ($m_e c$)
$u_\parallel$ ($m_e c$)
particles / bin
(c) measured binning error and model, both cases
energy 5%: measured $T_b - T$
energy 5%: model ×0.023
angular 5°: measured $T_b - T$
angular 5°: model ×0.331
10^{-3}
$T_b - T$, peak-normalised, $8 \le d \le 16$ cells
bin count B
